PROFESSIONAL SUMMARY

AI Engineer with expertise in end-to-end ML pipelines, RAG systems, and real-time model deployment. Built 4 production-grade ML solutions achieving 89-93% accuracy across classification and regression tasks. Specialized in feature engineering, LLM orchestration (LangChain), vector databases (Qdrant, FAISS), cloud infrastructure (AWS, Terraform), containerized deployment (Docker, Jenkins, GitHub Actions, ArgoCD), FastAPI backends, and optimizing inference latency.

TECHNICAL SKILLS

Languages: Python

Web Development: HTML, CSS, JavaScript, Node.js, React

ML Frameworks: TensorFlow, Scikit-learn, LangChain

Cloud & DevOps: AWS, Terraform, Docker, Kubernetes, ArgoCD, Jenkins, GitHub Actions, CI/CD

Backend & Tools: FastAPI, Streamlit, Pandas, SQL

Data & Vector Stores: Qdrant, FAISS

Techniques: Supervised Learning, Deep Learning, NLP, RAG, Ensemble Methods

EXPERIENCE

Software Developer Intern | Tech Modulus *June 2026 – Present*

WhatsApp Chat Analysis *May 2026*

- Designed text analytics pipeline parsing WhatsApp exports via regex preprocessing, extracting temporal and linguistic features from multi-user conversations.
- Developed NLP engine with custom stop-word filtering for Hindi-English code-mixed text enabling accurate word frequency analysis.
- Built interactive Streamlit dashboard supporting per-user and aggregate analytics: message volume, word counts, media/link detection, engagement ranking, wordcloud visualization.
- Implemented modular architecture (preprocessing.py, helper.py, app.py) processing 5,000+ messages in <2 seconds.

Voice Disease Detection System *Mar–Apr 2026*

- Engineered 15 acoustic features (pitch, jitter, shimmer, MFCC) on 500+ clinical samples, reducing feature space by 65% while maintaining model sensitivity.
- Architected ensemble classifier (Random Forest + SVM) achieving 89% sensitivity, 87% specificity, 0.91 AUC-ROC vs 0.78 baseline.
- Optimized inference pipeline reducing latency from 120ms to 45ms (62% improvement); containerized with Docker for consistent, portable clinical deployment.

Telecom Churn Prediction Platform *Feb–Mar 2026*

- Developed end-to-end ML pipeline on 50,000 customer records using SMOTE to handle 92% class imbalance.
- Engineered 30+ features from behavioral/billing data; refined XGBoost achieving 93.2% accuracy, 0.91 AUC-ROC, 88% recall.
- Deployed Dockerized FastAPI REST API via a Jenkins CI/CD pipeline with automated GitHub Actions build checks, provisioning AWS infrastructure with Terraform; supported 1,000+ predictions/hour with <200ms P99 latency and 99.2% uptime over 30 days.

YouTube Chatbot with Retrieval-Augmented Generation *Feb–Mar 2026*

- Architected RAG pipeline combining LangChain with Qdrant and FAISS vector indexing and the Claude API for context-grounded Q&A.
- Streamlined prompt engineering, reducing hallucinations from 42% to 9% with 92% answer relevance via manual evaluation.
- Deployed Streamlit frontend in a Docker container on AWS, using ArgoCD for GitOps-based continuous deployment, sustaining 150 active users with 98.5% uptime and sub-2s response latency.

EDUCATION

B.E. Computer Science, Specialization: AI & Machine Learning *Expected June 2028*

M.H. Saboo Siddik College of Engineering, Mumbai

CERTIFICATIONS

Data Scientist Certification – Code With Harry (2026)
